

What I have learnt before:

I have learnt about the lifecycle of animals

Cultural capital

The real life knowledge that links is: using secondary sources for research
 Children will have an understanding of the changes a human goes through in life
 The jobs it can be used in are: Biologist, Medical Professional (doctors),

**Skills**

I can report and present findings

I can share my findings in a graph

I can identify the relationship between variables

Forever Facts

There are six main stages in the human life cycle

Boys and girls go through changes in puberty

Changes in the body in adolescence occur to enable reproduction during adulthood

Gestation periods differ in different species

Exciting Books**Our Endpoint**

I can describe the changes humans go through as they age

Subject Specific Vocabulary

toddler

A young child who is just beginning to walk

puberty

The physical stage of development between childhood and adulthood

adolescence

The social and emotional stage of development between childhood and adulthood

adulthood

The stage of development when a human is fully grown and mature

gestation

The process or time when development takes place before birth

life expectancy

The length of time, on average, that a particular animal is expected to live

life cycle

The changes a living thing goes through, including reproduction
