

**Our Endpoint**

To describe a habitat and the plants and animals that live in it.

Forever Facts

All living things need air, food and water in order for their basic needs to be met.

Some things have never been alive, for example, anything made from metal, plastic or stone.

Animals live in different habitats including oceans, deserts, Arctic, tropical and woodland.

Personal development

Spiritual: Show a sense of enjoyment and fascination in our learning.

Moral: Understanding the consequences of our actions.

Social: Working together and demonstrating skills and attitudes that will allow them to contribute positively to life in Modern Britain.

Subject Specific Vocabulary

habitat	A place that an animal or plant lives which provides food, water and shelter.
survival	To continue to live.
microhabitat	A habitat which is very small.
minibeasts	A small animal like an insect or spider.
adaptation	Changes over time that enable a plant or animal to survive.
food chain	The order in which living things depend on each other for food.
predator	An animal that hunts other animals for food.
prey	An animal that is hunted or caught for food, usually by another animal.
dependency	Relying on another for help or to provide what you need.

What I have learnt before.

To make simple observations.

Exciting books**Skills**

Make observations, ask and answer questions.

Identify and classify.

Record in different ways including labelled diagrams.

Begin to use scientific vocabulary.
